

Astronomy & Astrophysics

A journal for astronomers by astronomers

aanda.org

A journal run by and for astronomers

Astronomy & Astrophysics (A&A) is an international, peer-reviewed journal publishing original research across all areas of astronomy and astrophysics.

Its mission is to:

- Publish high-quality research of lasting scientific value
- Support rigorous peer review, scientific integrity and reproducibility
- Serve the astronomy community through community-led publishing
- Promote Open Science and broad accessibility of research
- Support early-career researchers through initiatives such as Scientific Writing for Young Astronomers (SWYA) and the A&A Awards

Key Points

- Governed by the astronomy community through its sponsoring countries and Editors
- Fully Open Access since 2022 under Subscribe to Open
- Open Access for all*
- One of the world's leading astronomy journals
- Read in more than 210 countries and territories
- Special Issues of major mission and collaborations
- More than 50 years of publishing excellence

*No APCs are charged to authors. Moderate page charges apply to authors from non-sponsoring countries. Additional page charges apply to papers exceeding the journal's page limits for all authors.

A journal run by and for astronomers

BOARD OF DIRECTORS

Represents the 28 sponsoring countries and ESO, governs A&A and sets the journal's policies, including publishing guidelines, selection of Editors, financial matters and membership of new sponsoring countries.

EDITORIAL OFFICE

Handles administration services for the journal

**Astronomy
& Astrophysics**
A journal for astronomers
by astronomers

EDITORS-IN-CHIEF & ASSOCIATE EDITORS

Astronomers ensuring scientific excellence through rigorous peer review and editorial leadership.

edp sciences

Publishing partner ensuring professional publishing and global dissemination.

CDS

Manages and preserves data published in A&A, ensuring long-term accessibility and integration with astronomy databases.

Working together towards common goals

Rigorous peer review and editorial standards

Open Access and Open Science

Global visibility and long-term preservation

A journal that serves the entire astronomy community

Long-term stability through community governance

Editors-in-Chief

Thierry Forveille

Editor-in-Chief *Astronomer at the Observatory of Grenoble*

His main area of research is the observational study of brown dwarfs and extrasolar planets.

João Alves

Letters Editor-in-Chief *Professor of Stellar Astrophysics at the University of Vienna*

He investigates the formation of stars and planets and is also interested in Astrobiology.

David Elbaz

Managing Editor *Scientific Director of the Astrophysics Department of CEA*

His primary research interest is to understand how galaxies formed and evolved during cosmic time.

Supported by 21 Associate Editors with expertise spanning the full range of scientific topics covered by the journal.

Board of Directors

Arūnas Kučinskas

Chairperson *Professor at Vilnius University*

His main research interests include 3D hydrodynamical modeling of stellar atmospheres, non-LTE radiative transfer, and spectroscopic studies of old Galactic stellar populations.

László Kiss

Vice Chairperson *Director-General of the HUN-REN Research Centre for Astronomy and Earth Sciences in Budapest*

His main interest is in the physics of stars, exoplanets and small bodies in the Solar System, with a strong emphasis on astronomical observations from space.

Championing Open Science

A&A is published under the Subscribe to Open (S2O) model, meaning all articles are open access if library support is sufficient each year.

If not, content may be paywalled, but authors can still choose open access via the usual options or eligible agreements.

Encourage your library to subscribe:

subscribers@edpsciences.org

More info: aanda.org/subscribe-to-open-faqs

Other Key Features

Article formats and author tools

A&A articles are available in multiple formats including PDF and HTML, with extensive LaTeX and BibTeX support for astronomy publishing workflows.

Astronomy workflow integration

A&A supports integration with key astronomy resources including CDS, ESO archives, arXiv and ASCL, encouraging linking and citation of datasets and source code.

Rich media in A&A articles

A&A supports the publication of multimedia material, animations, supplementary materials and interactive research content.

Author names using non-Latin alphabets

Authors may choose to include names in their own language alongside English transliterations.

Database linking

A&A articles include direct links to associated datasets and astronomy resources including CDS services such as SIMBAD and VizieR, NASA ADS, and the ESO telescope bibliography.

Language support

Clarity and excellence in language editing to match the quality of the science.

Sponsoring countries

Dedicated to authors

Scientific Writing for Young Astronomers (SWYA)

A school created by A&A that helps PhD students present their research and develop skills in scientific writing and publishing.

A&A Awards

Two annual awards recognising excellence in astronomy publishing, one for an outstanding article by an early-career researcher and one for an outstanding article forming part of a PhD thesis.

Press releases and Highlights

Selected articles are showcased through press releases and A&A Highlights, helping promote research to the wider astronomy community. Weekly Highlights are freely available by e-mail via aanda.paris@obspm.fr.

Research visibility and discoverability

Authors benefit from services including Altmetric data, FundRef, Crossref and ORCID integration.

Editorial office and language support

An experienced permanent editorial office and specialist language editors support authors throughout the publication process.

E-mail alerts and updates

Readers can sign up on aanda.org to receive free e-mail alerts for new issues and journal updates.

Alongside original research articles, A&A publishes Letters to the Editor, which are short papers reporting on ground-breaking results or ideas (with fast-track publication).

Sections

- Letters
- Astrophysical processes
- Cosmology (including clusters of galaxies)
- Extragalactic astronomy
- Galactic structure, stellar clusters, and populations
- Interstellar and circumstellar matter
- Stellar structure and evolution
- Stellar atmospheres
- The Sun and the Heliosphere
- Planets and planetary systems
- Celestial mechanics and astrometry
- Atomic, molecular, and nuclear data
- Astronomical instrumentation
- Catalogs and data
- Numerical methods and codes
